

Instructions for Authors (continued)

6. Discussion

Be concise. What does your study show? Is your hypothesis affirmed or refuted? Discuss the importance of this article with regard to the relevant world literature; note that a complete literature review is unnecessary. Analyze your data and discuss the strengths, weaknesses, and limitations of your study.

7. Illustrations

Four original sets of tables, drawings, and photographs must accompany the manuscript.

Tables should be neatly typed, each on a separate page, with the title above the tabular data and any notes below. Define all abbreviations. Do not give the same information in tables that you give in the text or in figures. *Figures* should be submitted unmounted, identified on the back with only the figure number and the top plainly marked. *Remove from figures any identifying features such as authors' names because we send blinded manuscripts to reviewers.* Graphs and drawings should be 5 × 7-inch glossy prints of professional quality. *Radiographs or clinical photos:* Remove all markings (such as patients' initials, dates, names of institutions) from imaging before photographing. Any labels (e.g., arrows or lettering) must be applied with a professional product (such as Chartpak). These identifying labels must be large enough to be legible when the figure is minified. Sequences of radiographs should be of identical magnification. The subject should be centered in clinical photographs. Crop extraneous material and background before photographing. In the manuscript, give each figure a separate, fully explicit legend. Give each part of a figure its own legend. All abbreviations and symbols must be defined. Digital images may be submitted. For details, see "Submission of Electronic Images" that appears later in these guidelines.

Permissions: Photographs in which a person's face is recognizable *must* be accompanied by a letter of release from that person explicitly granting permission for publication in the Journal. For any material previously published, written permission for both print and electronic rights must be obtained from the copyright holder. Authors are also responsible for paying any fees required by copyright holders to reprint material.

Color figures are accepted only when color is necessary to convey clinical information. Authors are encouraged to submit black and white illustrations whenever possible.

Arthroscopy will assume the cost of publishing a limited number of color figures, the selection of which will be made by the Editor. The publication of color figures beyond this limited number will be charged back to the authors, who will receive a prepublication quotation of charges. Authors will retain the option of either publishing their illustrations in color at the quoted charge or providing black and white figures to be used instead.

Details of Style

Drug names: Use *only* generic names in referring to drugs. After first mention, add in parentheses any commonly used variant generic. *Abbreviations:* Follow the *AMA Manual of Style* (available from online booksellers).

References

The Journal follows the reference style given in the "Uniform Requirements for Manuscripts Submitted to Biomedical Journals" (see *N Engl J Med* 1997;336:309-315 or <http://www.icmje.org/>). References must be cited in the text by number and must appear in numerical order. Please do not include unpublished material or personal communications in your reference list. If necessary to your message, include unpublished material in the body of the text and end the statement with the appropriate information in parentheses. For example: (M. Scanlon, MD, personal communication, month and year of personal communication). Your reference list should be typed *double-spaced* and appear at the end of the text. Use the following samples when formatting your references. *Provide all authors' names when six or fewer; when seven or more, list the first three and add et al.* For abbreviations of journal names, refer to the *List of Journals Indexed in Index Medicus* (<ftp://nlmpubs.nlm.nih.gov/online/journals/ljiweb.pdf>). *Also, provide article titles and inclusive page numbers (321-328, not 321-8).* Accuracy of reference data is the responsibility of all authors.

Proofs

Proofs must be returned within 2 days of receipt; late return may delay publication of an article. Please check text, tables, figures, legends, and references carefully. To expedite publication, electronic page proofs rather than galleys will be sent to the corresponding author, and it may therefore be necessary to charge for alterations other than correction of printing errors.
