| ORIGINAL ARTICLES | 340 | Cuff Integrity After Arthroscopic Rotator Cuff Repair: Correlation With Clinical Results in 576 Cases
<i>Pierre-Henri Flurin, Philippe Landreau,
Thomas Gregory, Pascal Boileau, Laurent Lafosse,
Stéphane Guillo, Jean-François Kempf,
Bruno Toussaint, Olivier Courage, Nicolas Brassart,
Erick Laprelle, Christophe Charousset,
Alexandre Steyer, and Eugene M. Wolf</i> |
| | 347 | Arthroscopic Repair of Massive Rotator Cuff Tears With Stage 3 and 4 Fatty Degeneration
<i>Stephen S. Burkhart, Johannes R. H. Barth,
David P. Richards, Michael B. Zlatkin,
and Mitchell Larsen</i> |

On the Cover: Arthroscopic view of the left medial femoral condyle of a 17-year-old boy who underwent arthroscopically assisted anterior cruciate ligament reconstructive surgery with patella tendon autograft. The patient sustained the injury 2 months before while playing basketball. The image shows evidence of metaplasia and angiogenesis of the medial aspect of the medial femoral condyle in response to the injury. This lesion is the precursor to osteophyte formation at this site. During surgery, he was also found to have medial and lateral meniscal tears, which required a healing response and meniscal repair, respectively. Courtesy of Eric M. Manoff, M.D., and Mark F. Sherman, M.D.
