### **2014 Arthroscopy Journal Prize for Level I Evidence**

Although level of evidence is but one measure of the quality of a scientific article, studies of the highest levels of evidence are best able to provide answers to clinical questions. The Journal Board of Trustees, the AANA Board, and the Editors are pleased to announce that the *Arthroscopy* Journal Prize of \$5,000 will again be awarded to the report of the best Level I Evidence study. The 2014 prize will be judged by the Journal's Editors and Associate Editors who will consider those Level I papers published during the year.
