## INFOGRAPHIC

- 2600** Combined Anterior Cruciate Ligament and Lateral Extra-Articular Reconstruction  
*Andrew G. Geeslin, Jorge Chahla, and Robert F. LaPrade*

**On the Cover:** Right elbow in supination and extension, 30 degree endoscopic view (via a proximal parabiceps portal). A probe is used via a distal anterior portal cannula to assess the bare radial tuberosity area (T). The forearm is rotated to full supination to visualize the dorso-radial tendon insertion at the tuberosity.
